

## PDF Annotation Vertices Demo (/Vertices)

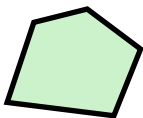

This page demonstrates how /Vertices define the geometry of Polygon and PolyLine annotations. Each annotation includes its explicit /Vertices array values for testing scaling behavior.

PolyLine annotation  
/Vertices = [100.0 240.0 160.0 300.0 220.0 260.0]

Polygon annotation  
/Vertices = [100.0 470.0 160.0 400.0 220.0 470.0]

Polygon (Pentagon)  
/Vertices = [120.0 620.0 140.0 560.0 180.0 550.0 220.0 580.0 200.0 630.0]

Note: /Vertices = [x1 y1 x2 y2 ...] defines each vertex in order.  
Scaling should proportionally change all coordinates in this array.
