

## PDF Annotation Border Properties Demo (/Border vs /BS)

This page contains two square annotations intended for testing scaling of border widths.

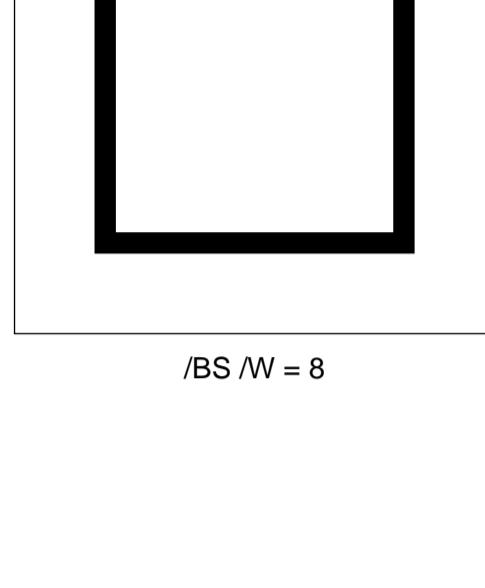

Left square: uses `/Border [0 0 12]` (width = 12 pt).

Right square: uses `/BS << /W 8 /S /S >>` (width = 8 pt, solid).

When applying a scaling matrix to annotations, both widths should scale proportionally.

`/Border width = 12`

`/BS /W = 8`
